

# CROSSOVER™

*SOD SEED MIXTURE* (TALL FESCUE & BLUEGRASS)

## DESCRIPTION

CROSSOVER™ mixture is formulated with improved turf type tall fescues and Kentucky bluegrass, combining the complimentary characteristics of turf type tall fescue with Kentucky bluegrass. CROSSOVER produces the popular turf type tall fescue based sod used extensively throughout the transition zone. Recently, tall fescue usage has been increasing farther north into traditional bluegrass-ryegrass regions. CROSSOVER fulfills the needs of progressive growers who desire to meet the demand for tall fescue based turfgrass sod. For golf course roughs, sports turf, lawns, and parks; sod produced from CROSSOVER mixture will provide a hardy, heat, and drought tolerant turf with broad genetic diversity.

Even though many of our tall fescues exhibit our IRT™ (Inherent Rapid Tillering) trait we do not believe that turfgrass breeders will develop spreading characteristics in tall fescue that will approach the superior performance and rhizomatous nature of improved Kentucky Bluegrass. For wear tolerance and durability in tall fescue turf, and sod tensile strength in turf type tall fescue sod production, choose CROSSOVER sod seed mixture.

## FORMULA

Example:

90% Improved Turf Type Tall Fescue\*

10% Kentucky Bluegrass

\*ask for current or custom formulations

## SEEDS PER POUND (APPROXIMATE):

335,000\*

\*seed count estimate – actual counts vary by lot

## RATE

225-350 pounds per acre

(DOUBLE COVERAGE seeding rates can be reduced by 25% compared to straight tall fescue).

## FEATURES

- Heat Tolerant
- Fast-establishing
- Fast-knitting
- High tensile strength - may be managed & harvested without netting
- Genetic diversity
- Good wear tolerance
- Long-term disease tolerance
